

# SAFETY FIRST

## CONTAINER SAFETY

When working with or near containers, it is important to always be aware of your position in relation to the container to avoid serious injury or death.

**Never place yourself under, between, or behind the container if it is:**

- Lifted by a truck
- Lifted by equipment
- On tilted rails
- On a tilted truck bed

This applies to anyone near the container. Take the necessary steps to prevent anyone from placing themselves in these areas.
